SUMMARY

Data-driven operations and technology professional who thrives at the intersection of business, technology, and financial markets. Passionate about leveraging data, automation, and process optimization to build scalable workflows that improve efficiency, reduce risk, and create measurable financial impact. Proven track record of translating complex business requirements into technology solutions that streamline operations, uncover actionable insights, and enable data-driven decision-making across a fast-paced investment environment.

PROFESSIONAL EXPERIENCE

Millennium Management, LLC — New York, NY
Operations Control Specialist — March 2023 - Present

- Designed and developed a scalable option position-migration workflow as the sole developer. Successfully executing three migrations of 20,000+ positions across 10 prime brokers with 99%+ accuracy, which allowed Equity and Treasury Operations to consolidate positions for margin efficiencies supporting billions of dollars in firm-wide savings.
- Built and managed a centralized market data entitlement workflow across four internal trade systems, analyzing user access and dataset overlap to surface redundant entitlements, inactive accounts, and over-provisioned users, informing market data cost optimization and exchange netting benefits.
- Recognized an opportunity to streamline manual corporate action processing and, as sole developer, translated business requirements into a Python/SQL workflow with a dynamic GUI that guided users through event-specific criteria, improving processing accuracy, reducing manual errors, and saving 5+ hours per week.
- Owned the end-to-end development of 20+ internal criteria-based reports, partnering with fixed income stakeholders to translate business requirements into enhanced reporting workflows that improved accuracy, reduced trade breaks, and lowered high risk items by 30%.
- Managed a team of developers in designing and maintaining a performance dashboard used by senior management to monitor external trading teams' adherence to negotiated parameters and evaluate returns, enabling data-driven oversight of trading activity and identifying opportunities to improve financial outcomes.
- Led cross-functional implementation of regulatory requirements for T+1 trade settlement, coordinating with internal technical teams, middle office, and external brokers to define requirements and ensure operational compliance.
- Leveraged firm-provided AI tools to develop an email intelligence workflow that classified and prioritized operational activity based on criteria like; email subject, age of failed trades, and net proceeds.

EDUCATION

City University of New York, College of Staten Island
Bachelor of Science in Computer Science — December 2022
Bachelor of Science in Biology — May 2020

TECHNICAL SKILLS

Programming: Python, SQL, HTML, CSS | **Data & Analytics:** Jupyter Notebook, Microsoft SQL Server, DataGrip, Alteryx, Tableau | **Tools:** Visual Studio Code, Claude Code, Git, GitHub, Unix, Microsoft Office
